# GARDEN CORNER CURVES

## PROJECT INFORMATION

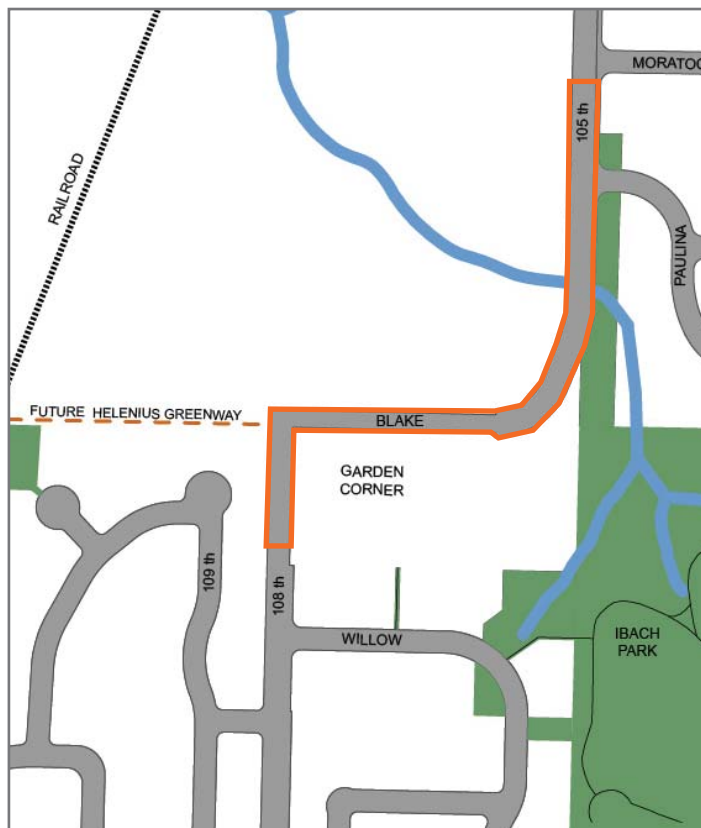

The Garden Corner Curves Corridor is a narrow, constrained roadway which accommodates people driving, walking and biking. The corridor includes SW 105th Avenue, SW Blake Street, and SW 108th Avenue (see map below). The goal of this project is to develop conceptual solutions that balance cost, safety for all users, community needs, environmental impacts, and right-of-way.

### ... Objectives ...

- Conduct a thoughtful public involvement process
- Develop concept alternatives based on community input

For background information and history on the project, see the website [www.tualatinoregon.gov/gardencornercurves](http://www.tualatinoregon.gov/gardencornercurves)

## FREQUENTLY ASKED QUESTIONS

PROJECT AREA MAP

*Will this concept study "lock" the City into completing improvements?*

The goal of the study is to identify what Tualatin residents and road users would like to see, and provide information for making future decisions.

*Will cost information be provided for each of the improvement alternatives?*

The concept study will identify and provide alternatives with their associated costs for the public to review.

*Will the concept study result in near term safety improvements?*

The City has also tasked the consultant with recommending potential near term improvements.
